Ecosystems - 5TH GRADE SCIENCE

An ecosystem is a group of living organisms inter-acting with their environment. An ecosystem is like a play, with different animals, plants, and non-living things playing the different roles. The role each thing plays is called its ecologi-cal niche. Some of the roles are biotic (or living, like plants and animals), while some are abiotic

Ecosystems and Biomes | Classroom Learning Video - YouTube

A habitat is simply the region in which organisms live, and includes all the living factors in that place. In other words, it contains all the biotic factors present. Ecosystems, on the other hand, include both the biotic factors (like animals), abiotic factors (like temperature and water), and the interactions between them. (7 votes)

Ecosystems and biomes (video) | Ecology | Khan Academy

An ecosystem is a community of interacting organisms & their environment. Organisms only survive in an ecosystem when their specific needs are met. Newly introduced organisms can throw off the balance of an ecosystem. A healthy ecosystem has many different kinds of organisms. Discussion Questions.
