The first complete overview of the most important contemporary architecture practice ever to have emerged from China The skylines of modern China are punctuated by architecture that amazes, inspires, and awes. Many of these structures are the work of new, experimental practices like China-based MAD Architects. MAD Works not only documents the buildings of this group of avant-garde architects but also traces the development of their ideas through associated practice including art, research, and exhibition projects. Organized thematically, the book explores the underlying concepts of MAD Architects' work. MAD Works is illustrated with photographs, architectural drawings, and 3D visualizations to provide a thorough exploration of MAD Architect's international portfolio of completed works, unbuilt projects, and future ideas.

Shanshui City, the latest book from MAD Architects' founder and principal partner, Ma Yansong, received an international release in October 2014. The publishing of the book coincides with the 10th anniversary of the founding of MAD Architects. Ma's poetic, yet precise language details the development and practice of design philosophy "Shanshui City", at the core of which is the idea that, "architects should delineate a new ideal for the city of the future, to gradually construct an urban environment that embodies both the convenience of the modern city and the ancient Eastern affinity for the natural world." "Shanshui" is an idealized worldview developed by Chinese through extended contact with the natural world, a worldview that integrates the everyday life of humanity with the impulse to seek spiritual refuge in nature. This "Shanshui City" is not simply an eco-city, or a garden-city, nor does it imply modeling the city's architecture on natural forms such as mountains. It represents humanity's affinity for the natural world, and our quest for inner fulfillment, as expressed in philosophies of the East.

"Beautified China shows the country's modern architecture in new light" - CNN Style Photo-Series "Provides an abstracted look at China's iconic architecture," - ArchDaily.com. This book of stunning photographs by architect and photographer Kris Provoost captures the wave of the architectural revolution in China. Internationally renowned architects such as Zaha Hadid, Rem Koolhaas, Ole Scheeren, Herzog & de Meuron, Daniel Libeskind and many others have been engaged in creative, futuristic, and flamboyant projects in China in recent years. The sky is literally the limit, both in terms of construction, use of materials and design. Unimaginable forms, which defy all rules of gravity, come to life in immense skyscrapers. Beautified China offers an overview of these revolutionary designs, capturing their surreal impact in photographs that explore the free play of form that characterises each building. The book features essays by Rem Koolhaas, Ma Yansong & Ole Scheeren, among others, and each photograph is accompanied by information pertinent to the project, including function, environment, and context. AUTHOR: Kris Provoost is a Belgian architect and photographer. After receiving his Master's in Architecture, he moved to China, where he further expanded his career. He worked for, among others, Zaha Hadid Architects & Buro Ole Scheeren. He also focuses on architectural photography. His work has previously appeared in CNN Style, Dezeen, ArchDaily, Designboom, gooood, That's Mag Beijing, Time Out Shanghai, Abduzeedo, Fubiz, and T-Magazine. SELLING POINTS: * A photo essay by Belgian architect and photographer Kris Provoost capturing the boldest and most iconic structures of the architectural revolution in China * Striking images of fantastical buildings from unexpected angles and perspectives 180 colour, 40 b/w images

The war in Georgia. Tensions with Ukraine and other nearby countries. Moscow's bid to consolidate its "zone of privileged interests" among the Commonwealth of Independent States. These volatile situations all raise questions about the nature of and prospects for Russia's relations with its neighbors. In this book, Carnegie scholar Dmitri Trenin argues that Moscow needs to drop the notion of creating an exclusive power center out of the post-Soviet space. Like other former European empires, Russia will need to reinvent itself as a global player and as part of a wider community. Trenin's vision of Russia is an open Euro-Pacific country that is savvy in its use of soft power and fully reconciled with its former borderlands and dependents. He acknowledges that this scenario may sound too optimistic but warns that the alternative is not a new version of the historic empire but instead is the ultimate marginalization of Russia.

China's explosive urban growth continues to make headlines, illustrated by dramatic shots of the latest commercial or residential buildings, each more outstanding (and often more outlandish) than the next. As the country's new money matures, it is increasingly being redirected from the necessity of industry to the nicety of culture. While the recession has put a damper on plans for new cultural venues in many world cities, museums in China are

booming. Once scarce, they have multiplied rapidly, with more than one thousand opening during the last decade. They are now found throughout the country in megacities, smaller urban centers, and even in more remote places like Ordos, Inner Mongolia (in the middle of the Gobi Desert). *New Museums in China* presents fifty-one of the most innovative museums of the last ten years in beautiful photographs, detailed drawings, and insightful texts based on interviews with an international slate of architects. This spectacular collection makes an excellent survey and sourcebook for architects, art and design enthusiasts, and Sinophiles alike.

The *Global Innovation Index 2020* provides detailed metrics about the innovation performance of 131 countries and economies around the world. Its 80 indicators explore a broad vision of innovation, including political environment, education, infrastructure and business sophistication. The 2020 edition sheds light on the state of innovation financing by investigating the evolution of financing mechanisms for entrepreneurs and other innovators, and by pointing to progress and remaining challenges — including in the context of the economic slowdown induced by the coronavirus disease (COVID-19) crisis.

The Closing of the American Mind, a publishing phenomenon in hardcover, is now a paperback literary event. In this acclaimed number one national best-seller, one of our country's most distinguished political philosophers argues that the social/political crisis of 20th-century America is really an intellectual crisis. Allan Bloom's sweeping analysis is essential to understanding America today. It has fired the imagination of a public ripe for change.

Shanghai's illustrious history and phenomenal future is celebrated in this book, which examines the evolution of the city's architecture and urban form in order to contextualise the challenges facing the city today. The physical legacies that reflect Shanghai's uniqueness historically and contemporarily are examined chronologically using specific case studies of exemplary architecture interwoven in a compelling narrative that unlocks the many mysteries surrounding this amazing metropolis. Some of the most influential colonial architecture in the world, outstanding examples of Modernism and Art Deco, and an exceptional selection of eclectic and vernacular architecture reflecting Shanghai's many adopted cultures are revealed. This is the first book ever to examine this remarkable subject in a manner that is both comprehensive and captivating in its written content and stunningly illustrated with over 300 archive and contemporary photographs and maps.

An account of the Flint water crisis shows that Flint's struggle for safe and affordable water is part of a broader struggle for democracy. When Flint, Michigan, changed its source of municipal water from Lake Huron to the Flint River, Flint residents were repeatedly assured that the water was of the highest quality. At the switchover ceremony, the mayor and other officials performed a celebratory toast, declaring "Here's to Flint!" and downing glasses of freshly treated water. But as we now know, the water coming out of residents' taps harbored a variety of contaminants, including high levels of lead. In *Flint Fights Back*, Benjamin Pauli examines the water crisis and the political activism that it inspired, arguing that Flint's struggle for safe and affordable water was part of a broader struggle for democracy. Pauli connects Flint's water activism with the ongoing movement protesting the state of Michigan's policy of replacing elected officials in financially troubled cities like Flint and Detroit with appointed "emergency managers." Pauli distinguishes the political narrative of the water crisis from the historical and technical narratives, showing that Flint activists' emphasis on democracy helped them to overcome some of the limitations of standard environmental justice frameworks. He discusses the pro-democracy (anti-emergency manager) movement and traces the rise of the "water warriors"; describes the uncompromising activist culture that developed out of the experience of being dismissed and disparaged by officials; and examines the interplay of activism and scientific expertise. Finally, he explores efforts by activists to expand the struggle for water justice and to organize newly mobilized residents into a movement for a radically democratic Flint.

War and Architecture is a timely and moving response by architect Lebbeus Woods to the bombing of Sarajevo. With text in both English and Croatian, accompanied by the author's exquisitely drawn, hauntingly beautiful proposals, the book is both dedicated and addressed to the citizens of this ravaged city. Lebbeus Woods has long been fascinated by the intimate ties between architecture and violence. He identifies the two predominant patterns for rebuilding cities following catastrophic destruction: restoring the city exactly to its previous, "historical" state; or "erasing" the remains of the city to construct a new utopia. These, he argues, are twin forms of denial. Woods draws an analogy to the process of biological and emotional healing, presenting architectural forms that act as "injections," "scabs," "scars," and "new tissue," within the complex organism of a city. "Only by facing the insanity of willful destruction," he argues, "can reason begin to believe again in itself."
