While there are many great research articles, good books, and provocative policy analyses related to the economics of education, these materials are often written to influence the policy process and not necessarily for students with limited knowledge of the underlying policies and the economic framework. This textbook is intended to serve as a foundation for a broad-based course on the economics of education. Its goal is to provide an overview of economics of education research: to lay out the evidence as clearly as possible, note agreements, disagreements, and unresolved points in literature, and to help students develop the tools necessary to draw their own conclusions.

Most people know of aphids as garden pests, infesting the soft green tissues of plants in vast numbers and killing them by sucking out the sap. Indeed, among the 4000 or so known species of aphids about 250 are pests, and in temperate regions several are economically important agricultural pests that damage crops directly during feeding or act as vectors for plant pathogens. But aphids are also important model organisms in evolutionary biology and ecology because they combine a number of unique features such as complex life cycles involving the development of morphological distinct phenotypes (polyphenism), sexual and asexual reproduction strategies and changes of host plants. Aphids can also be regarded as holobionts because they are colonized by obligate and facultative microbes which enable them to feed exclusively on phloem sap and influence their resistance against pathogens, parasitoids or environmental stress. This book combines fundamental information about aphids with chapters addressing state-of-the-art research in topics such as aphid-related phylogeny, genome biology, epigenetics and chemical ecology.

This book examines the role of psychopharmacological treatment in a range of disorders that may be encountered during pregnancy, including major depressive disorders, anxiety disorders, bipolar affective disorder, schizophrenia, eating disorders and substance abuse. The natural history of each condition pre and post-partum is analyzed and the evidence for the efficacy of drug treatments, evaluated. Special attention is paid to the potential dangers of different treatment options for both mother and fetus, covering risks of malformation, pregnancy and obstetric risks, neonatal risks and possible long-term consequences. The risks of not treating a particular condition are also analyzed. On the basis of the available evidence, management guidelines are provided that additionally take into account non-pharmacological options. Closing chapters consider the value of complementary and alternative medicine and ECT and explore future research directions.
