A complete, 344-page solution manual, for instructors only, is still available for download at the Pearson web site (under the Resources tab). However, using the solution manual defeats the whole purpose of doing physics and nobody (including instructors) should ever actually look at it. Printed copies of the manual are no longer available.

= N (7) Schroeder asks us to prove that for a system in thermal and diffusive equilibrium with a reservoir,  $F$  tends to decrease. I suspect he would use a derivation similar to that leading up to his equation 5.29 for  $F$ , but as I don't trust that method, I'll use the method that deals with the total entropy of the system.

equation (in other words, a solution for  $t \geq 1$ ). Use this equation to obtain the time evolution  $\langle N_1(t) \rangle$  of the average value of  $N_1$ . Compare this analytical form with the results of your simulations. \*\*\* Note that  $\langle N_1(t) \rangle = X_{N_1}^{-1} P(N_1; t)$ : Using the stochastic equation, it is easy to see that  $\langle N_1(t+\tau) \rangle = \frac{1}{2} N \langle N_1(t) \rangle + 1$ ; which leads to ...
