Inadequate standard operating procedures (SOPs) are one of the most frequently cited causes of many deficiencies and observations found in Forms 483 and Warning Letters. And while specific SOP issues can often be traced back to poor communication, monitoring, and/or enforcement, a poorly written SOP can quietly grow into a host of other major compliance problems.

Pharmaceutical, biotechnology, and life-sciences companies rely on standard operating procedures (SOPs) to ensure the quality and safety of their products and services. But in many cases, these documents themselves lack quality. Containing important technical instructions, SOPs are often wordy, confusing, and imprecise, thereby increasing quality and compliance risks for the organization. The problem is not lack of technical knowledge. The professionals who write SOPs are technically sound, but what they lack is sound technical writing skills. An ideal resource for engineering professionals, technical writers, and students alike, *Writing High-Quality Standard Operating Procedures: A Practical Guide to Clear, Concise, and Correct SOPs* offers a step-by-step roadmap to take

Under the guidance of Atul Mathur, an engineer and a technical writer with over fifteen years of experience, you'll learn to identify the attributes of high-quality SOPs; create right content structure for SOPs; follow a systematic process for writing SOPs; apply best practices in SOP writing; and avoid common errors. Honing your technical writing skills is a pivotal step toward high-quality SOPs.

This is the fourth volume of Standard Operating Procedures (SOPs) compiled from documents prepared in these laboratories in part fulfilment of the requirements of various Good Laboratory Practice (GLP) regulations and guidelines. SOPs have now become an everyday feature of work in most industrial and contract toxicology

definition of the mechanics of unit operations which together comprise the framework for experiments in safety evaluation. Metabolic studies and analytical chemistry are closely linked to toxicology since they embody essential aspects of the overall assessment of product safety. Some authorities consider certain parts of these subjects to be outwith the scope of the GLP requirements but for the reasons stated this is contrary to our own view. We have tried where possible to define in SOP format for use in our own laboratories the unit operations involved in these disciplines and they form the basis of this volume. Some relevant material from previous volumes has been brought together in updated form and is also presented here for

The Food and Drug Administration of the US Government published its Good Laboratory Practice Regulations for Non-Clinical Laboratory Studies in the Federal Register (22 December 1978). The Regulations are the culmination of a number of years of investigation into the standards to which safety evaluation studies were performed in laboratories in the USA.
